EROSION CONTROL NOTES:

1. If necessary, bluffs which exceed 20 feet (6 meters) shall be stabilized with synthetic or vegetative mats, and then reseeded. Site may require additional erosion control measures to be installed. Temporary erosion control devices may be required to protect existing access roads, and temporary covers or erosion control devices shall be placed over disturbed areas. All temporary erosion control devices shall be removed prior to the project's completion, and normal post-construction uses shall be restored.

2. Erosion control measures may be installed at any time during construction and may be installed in stages to provide temporary protection for disturbed areas. These measures must be maintained until the area is ready to be used for its intended purpose or until the area is permanently stabilized.

3. All erosion control devices shall be inspected on a regular basis and be maintained to ensure their proper operation. If necessary, additional erosion control devices may be installed to protect existing access roads and to prevent erosion of disturbed areas.

4. All erosion control devices shall be removed prior to the project's completion, and normal post-construction uses shall be restored. All temporary erosion control devices shall be removed prior to the project's completion, and normal post-construction uses shall be restored.

5. All erosion control devices shall be inspected on a regular basis and be maintained to ensure their proper operation. If necessary, additional erosion control devices may be installed to protect existing access roads and to prevent erosion of disturbed areas.

6. All erosion control devices shall be removed prior to the project's completion, and normal post-construction uses shall be restored. All temporary erosion control devices shall be removed prior to the project's completion, and normal post-construction uses shall be restored.

7. Compost filter socks are designed to be used for composting large quantities of organic material. They are installed by placing them on the ground and covering them with compost. The filter sock will then collect any runoff from the compost area.

8. Compost filter socks are designed to be used for composting large quantities of organic material. They are installed by placing them on the ground and covering them with compost. The filter sock will then collect any runoff from the compost area.

9. Compost filter socks are designed to be used for composting large quantities of organic material. They are installed by placing them on the ground and covering them with compost. The filter sock will then collect any runoff from the compost area.

10. Compost filter socks are designed to be used for composting large quantities of organic material. They are installed by placing them on the ground and covering them with compost. The filter sock will then collect any runoff from the compost area.

11. Compost filter socks are designed to be used for composting large quantities of organic material. They are installed by placing them on the ground and covering them with compost. The filter sock will then collect any runoff from the compost area.

12. Compost filter socks are designed to be used for composting large quantities of organic material. They are installed by placing them on the ground and covering them with compost. The filter sock will then collect any runoff from the compost area.

13. Compost filter socks are designed to be used for composting large quantities of organic material. They are installed by placing them on the ground and covering them with compost. The filter sock will then collect any runoff from the compost area.

14. Compost filter socks are designed to be used for composting large quantities of organic material. They are installed by placing them on the ground and covering them with compost. The filter sock will then collect any runoff from the compost area.

15. Compost filter socks are designed to be used for composting large quantities of organic material. They are installed by placing them on the ground and covering them with compost. The filter sock will then collect any runoff from the compost area.

16. Compost filter socks are designed to be used for composting large quantities of organic material. They are installed by placing them on the ground and covering them with compost. The filter sock will then collect any runoff from the compost area.

17. Compost filter socks are designed to be used for composting large quantities of organic material. They are installed by placing them on the ground and covering them with compost. The filter sock will then collect any runoff from the compost area.

18. Compost filter socks are designed to be used for composting large quantities of organic material. They are installed by placing them on the ground and covering them with compost. The filter sock will then collect any runoff from the compost area.

19. Compost filter socks are designed to be used for composting large quantities of organic material. They are installed by placing them on the ground and covering them with compost. The filter sock will then collect any runoff from the compost area.

20. Compost filter socks are designed to be used for composting large quantities of organic material. They are installed by placing them on the ground and covering them with compost. The filter sock will then collect any runoff from the compost area.

21. Compost filter socks are designed to be used for composting large quantities of organic material. They are installed by placing them on the ground and covering them with compost. The filter sock will then collect any runoff from the compost area.

22. Compost filter socks are designed to be used for composting large quantities of organic material. They are installed by placing them on the ground and covering them with compost. The filter sock will then collect any runoff from the compost area.

23. Compost filter socks are designed to be used for composting large quantities of organic material. They are installed by placing them on the ground and covering them with compost. The filter sock will then collect any runoff from the compost area.

24. Compost filter socks are designed to be used for composting large quantities of organic material. They are installed by placing them on the ground and covering them with compost. The filter sock will then collect any runoff from the compost area.

25. Compost filter socks are designed to be used for composting large quantities of organic material. They are installed by placing them on the ground and covering them with compost. The filter sock will then collect any runoff from the compost area.

26. Compost filter socks are designed to be used for composting large quantities of organic material. They are installed by placing them on the ground and covering them with compost. The filter sock will then collect any runoff from the compost area.
